{quickdown:109}

Jx List Files v1.3 has been released containing several new changes:

- Sizes are printed in readable format.
- Added date formatting, defaulting to Joomla date format.
- Fixed bug with excluded files in sub-directories not being excluded.
- Exclude files based on extensions.
- Refactored code into a dynamic object instead of static.
- Filename sorting changed to case insensitive.

A native Joomla 1.5 module to list the files of a directory on your web server.

## Main features:

- List files from a directory on your web server.
- Can add links to the files.
- Translatable, delivered with English and Swedish
- Icons to display the type of file.
- View template to change the html.
- CSS file to manage the look.
- Hide specific files from the list.
- Sort by filename, file size or date either ascending or descending.
- Group files by sub-directory.
- Files can be opened in new window.
