

## Things to come

I've found some time lately and have done some minor updates to thing. These will be released as soon as I have time to package them properly.

Some of the things to come:

- Rewritten version of Jx Title Flag for Joomla 1.5 native
- Minor bug fixes to Jobline, fixing a few backend issues.
- A new release candidate of Jambook 1.0, which should fix most known major problems. It also contains importer for another guestbook component, BookJoomlas.
- This site, Jx Development, will finally be upgraded to Joomla 1.5.
- I'm only half-way through updating Mamblog to work with Joomla 1.5 yet, but will hopefully get that finished some time too.
- Complete redesign of Jx Development with upgrade, hopefully making it prettier, as well as easier to find some information.
- Updates to Jx List Files with a few new features.
- New plugin that I'm using on this site to show the "Component Showcase" boxes. This is a sort of templating system that allows the admin to use the same html for different data easily. In conjunction with a content includer this has made me able to include these little boxes in different places on the site.
- Jobline v1.2 has been a long time in the making, but I'll hopefully be able to release a beta version soon. I've released an alpha version to a few people already and I've been getting good feedback on it.

That's probably not all, but it's all I can think of right now.
