{quickdown:106}

Jx List Files v1.2 has been released. New features: Better CSS file sent in by Doug Ludlow. Now allows to change the sort order and direction.

A native Joomla 1.5 module to list the files of a directory on your web server.

Main features:

- List files from a directory on your web server.
- Can add links to the files.
- Translatable, delivered with English and Swedish
- Icons to display the type of file.
- View template to change the html.
- CSS file to manage the look.
- Hide specific files from the list.
- Sort by filename, file size or date either ascending or descending.
